

Atonix Digital.

Extracting digital insights by connecting the power of math and data to drive business decisions.

Atonix Digital™ offers a portfolio of products that help simplify asset management by putting your data to work – to optimize performance, improve reliability and efficiency, detect emerging risks and provide an easily justifiable return on your investment.

Our products are powered by ASSET360®, a cloud-based data analytics platform that improves the effectiveness and efficiency of operations and planning for complex and distributed assets. Purpose-developed to serve the needs of owners and operators of complex infrastructures such as power generation and distribution systems, water utilities, industrial assets and smart cities.

Atonix Digital customers leverage our products throughout the life cycle - including planning, design, construction, and operation phases – to improve ROI, reduce risk, and improve decision making. ASSET360 integrates and interprets data from myriad infrastructure sources to interpret operational behaviors, schedule and track project tasks, facilitate asset management decisions, and extend planning horizons. User-friendly dashboards provide a holistic view while supporting analytics and data are just a few clicks away.

ASSET360's intuitive features simplify adoption and use. Data is displayed in easy-to-understand visualizations to speed decision-making, while browser-based access makes it accessible to all authorized users - anytime, anywhere. Atonix Digital delivers cutting-edge technology and powerful data analysis to empower businesses to remain nimble, efficient and competitive.

Atonix Digital products are uniquely built to solve the needs of the customers we serve. To learn more about our products, visit atonix.com and follow us on Twitter at [@AtonixDigital](https://twitter.com/AtonixDigital).

RISK ASSESSMENT

Leverages probability and consequence of failure models to ensure asset up-time and reliability.

INVESTMENT PLANNING

Compares complex investment scenarios by modeling the impacts of differing combinations of goals, approaches, and investment levels.

PROGRAM MANAGEMENT

Integrates and interprets data from multiple disparate sources to clarify the interdependencies among projects, plan phases, systems, and assets efficiently.

PERFORMANCE ANALYSIS

Provides quantification of operational performance and an intuitive dashboarding and exploration environment to understand asset performance.

MONITORING & DIAGNOSTICS

Enables companies and utilities to capture, monitor and analyze critical data to make informed decisions by providing early detection of emerging issues.
