Offshore Oil & Gas operators experience downtime on average **\$49 million** annually in financial impacts due to unplanned downtime. For the worst performers, the negative financial impact can be upwards of **\$88 million**.*

Fewer than **24%** of operators describe their maintenance approach as a **predictive** one based on data and analytics. Over **75%** either take a reactive or time-based approach.*

*Source: 2018 Kimberlite Research Study, market research and analytics firm serving the Oil & Gas industry.

Operators using a **predictive**, data-driven approach to maintenance experience **36% less** unplanned downtime than those with a reactive approach. This resulted in, on average, **\$17 million** dropping to the bottom line annually.*

Atonix Digital™ asset management solutions help **Oil & Gas** operations professionals shorten issue response times, respond to problems well before they trigger alarms or force shutdowns, extend the life of their infrastructure assets and provide an easily justifiable return on their investment.
