

Atonix Digital helps companies simplify Asset Performance Management (APM) by putting your data to work to detect emerging risks, minimize unplanned downtime, enhance efficiency, and improve planning effectiveness.

A wholly-owned subsidiary of Black & Veatch, Atonix Digital develops a portfolio of software products and solutions that help infrastructure-intensive organizations plan, build, and operate in an ever-changing business and technology landscape. We help our customers transform business operations and restructure processes to achieve new levels of productivity and reliability. We strive to be easy to work with, empower your teams to be more productive and provide your organization a quick return on their investment.

Single Integrated APM Platform

Our secure, purpose-built data analytics platform, ASSET360®, seamlessly integrates functional modules across each of our products and solutions to maximize performance and provide a singularly intuitive user experience. ASSET360 was purpose-built by engineers for engineers to streamline and improve planning and management for complex, distributed, mission-critical assets.

Powerful Data Analysis

Our customers achieve more – and sleep more soundly – thanks to the groundbreaking, holistic view of processes, operations, and resources that Atonix Digital gives them. ASSET360 integrates and processes data from myriad infrastructure sources to interpret dependencies among systems, sites, and project tasks. Crisp, intuitive dashboards provide a holistic view of operations as well as the ability to isolate specific issues, ensuring complete transparency and accountability.

Used by hundreds of customers worldwide, ASSET360 products and solutions apply cutting-edge technology and powerful data analysis to empower businesses to remain nimble, efficient and competitive.

Atonix Digital products and solutions are architected and developed specifically to address the unique challenges faced by today's infrastructure leaders. Rest assured, we've got your back!

One APM Platform from One Provider.

RISK ASSESSMENT

Leverages probability and consequence of failure models to ensure asset up-time and reliability.

INVESTMENT PLANNING

Compares complex investment scenarios by modeling the impacts of differing combinations of goals, approaches, and investment levels.

PROGRAM MANAGEMENT

Integrates and interprets data from multiple disparate sources to clarify the interdependencies among projects, plan phases, systems, and assets efficiently.

PERFORMANCE ANALYSIS

Provides quantification of operational performance and an intuitive dashboarding and exploration environment to understand asset performance.

MONITORING & DIAGNOSTICS

Enables companies and utilities to capture, monitor and analyze critical data to make informed decisions by providing early detection of emerging issues.
