

# PI AF Jumpstart with AtonixOI

## A Unique Benefit when Implementing AtonixOI

PI Asset Framework (AF) is a powerful feature offered by OSIsoft, yet many PI deployments fail to get AF implemented due to the time consuming and costly nature of setup. The process of creating Element Templates and Attributes, building the hierarchical representation of assets, and mapping tags is daunting.

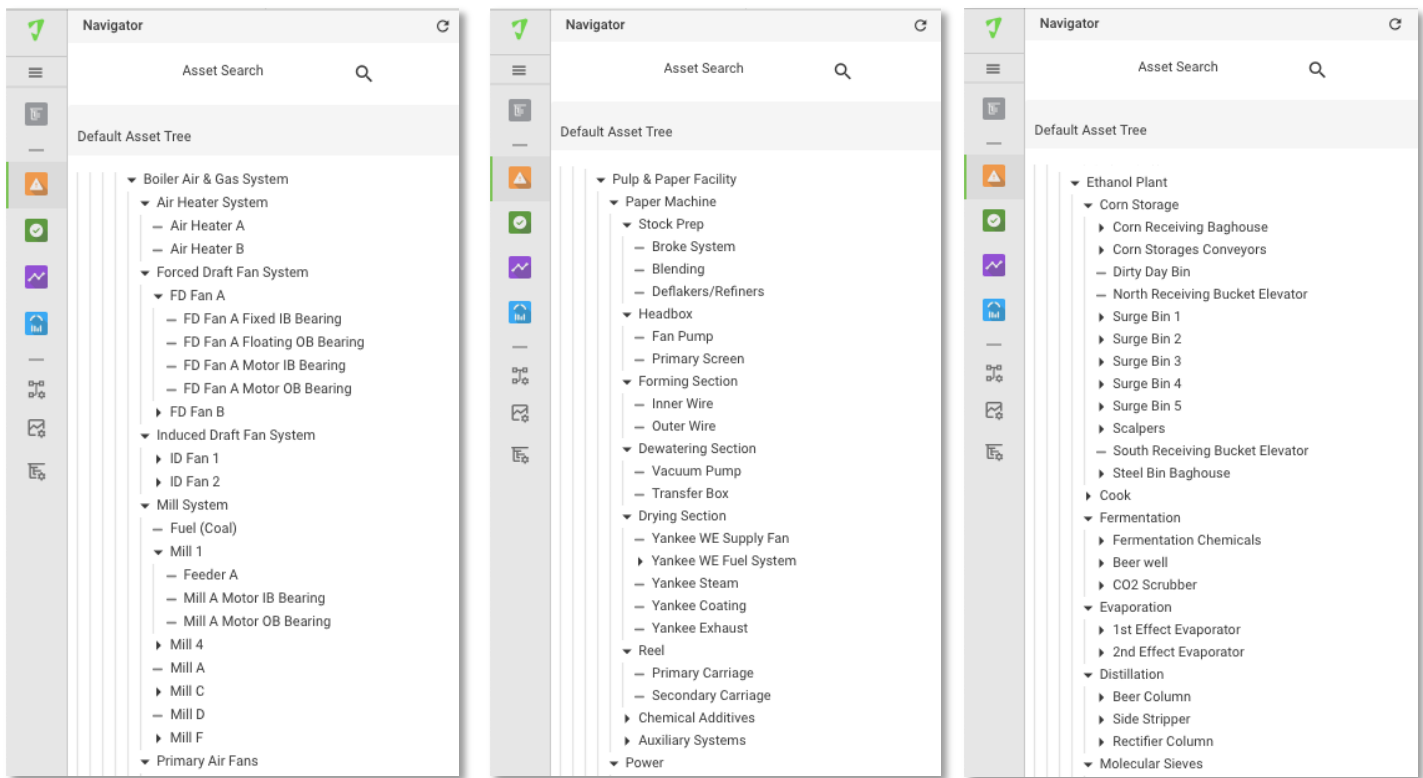

### Want to get a Jumpstart on your PI AF? Here's how!

AtonixOI is known for its rapid deployment of machine learning models enabled by proven asset, tag, and model templates. These templates simplify the hierarchy building process. The resulting structure is easily downloaded from AtonixOI and imported as a PI AF hierarchy.

The Atonix PI AF Jumpstart typically delivers 75-80% of the hierarchy and tag mapping of a custom PI AF deployment, and is **available in 1-2 weeks** from the start of your AtonixOI subscription. The import to PI is simple as the Jumpstart is pre-formatted as a PI Builder spreadsheet.

### Two Birds with One Stone

A complete AtonixOI deployment takes a fraction of the time of a typical PI AF deployment, but don't forget the goal of an AF deployment...the structure enables downstream value in visualization and analytics. By deploying AtonixOI and PI AF simultaneously, the digital transformation journey is significantly shortened. Talk to us about how AtonixOI prevents unplanned downtime and Jumpstarts the PI AF deployment.
